Coherent Rendering in Mixed Reality

What is needed?

- Geometry & Registration

Coherent Rendering in Mixed Reality

What is needed?

- Geometry & Registration
- Material

Coherent Rendering in Mixed Reality

What is needed?

- Geometry & Registration
- Material
- Light & Shadows

Coherent Rendering in Mixed Reality

What is needed?

- Geometry & Registration
- Material
- Light & Shadows
- **Camera effects!**

Camera Effects in Mixed Reality

- Rendering not consistent with real camera

Camera Effects in Mixed Reality

- Rendering not consistent with real camera
 - Missing lens effects (Depth of field)

Camera Effects in Mixed Reality

- Rendering not consistent with real camera
 - Missing lens effects (Depth of field)
 - Wrong lighting/shadows (Exposure, ISO)

Camera Effects in Mixed Reality

- Rendering not consistent with real camera
 - Missing lens effects (Depth of field)
 - Wrong lighting/shadows (Exposure, ISO)
 - Wrong colors (Whitebalance)

Simulating Camera Effects

Problems

- Parameters needed often unknown
- Finetuning for each camera required

Simulating Camera Effects

Problems

- Parameters needed often unknown
- Finetuning for each camera required

Solution

- Capture images to infer parameters
- Simulate camera using deep learning
- Can be applied to every camera

Simulating Camera Effects

Problems

- Parameters needed often unknown
- Finetuning for each camera required

Solution

- Capture images to infer parameters
- Simulate camera using deep learning
- Can be applied to every camera

System Overview

Lens Effects

Lens Effects

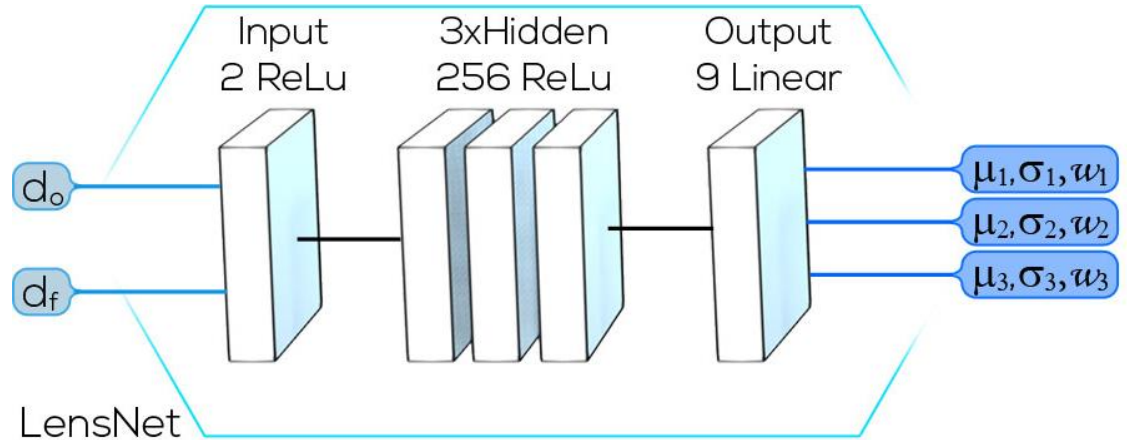

- Prominent effect is out-of-focus blur
- Parts of the scene which are not at the focus plane

Lens Blur Network

LensNet (MLP)

- Input depth & focus distance
- Output parameters for GMM
- Render with GMM ($k=3$)

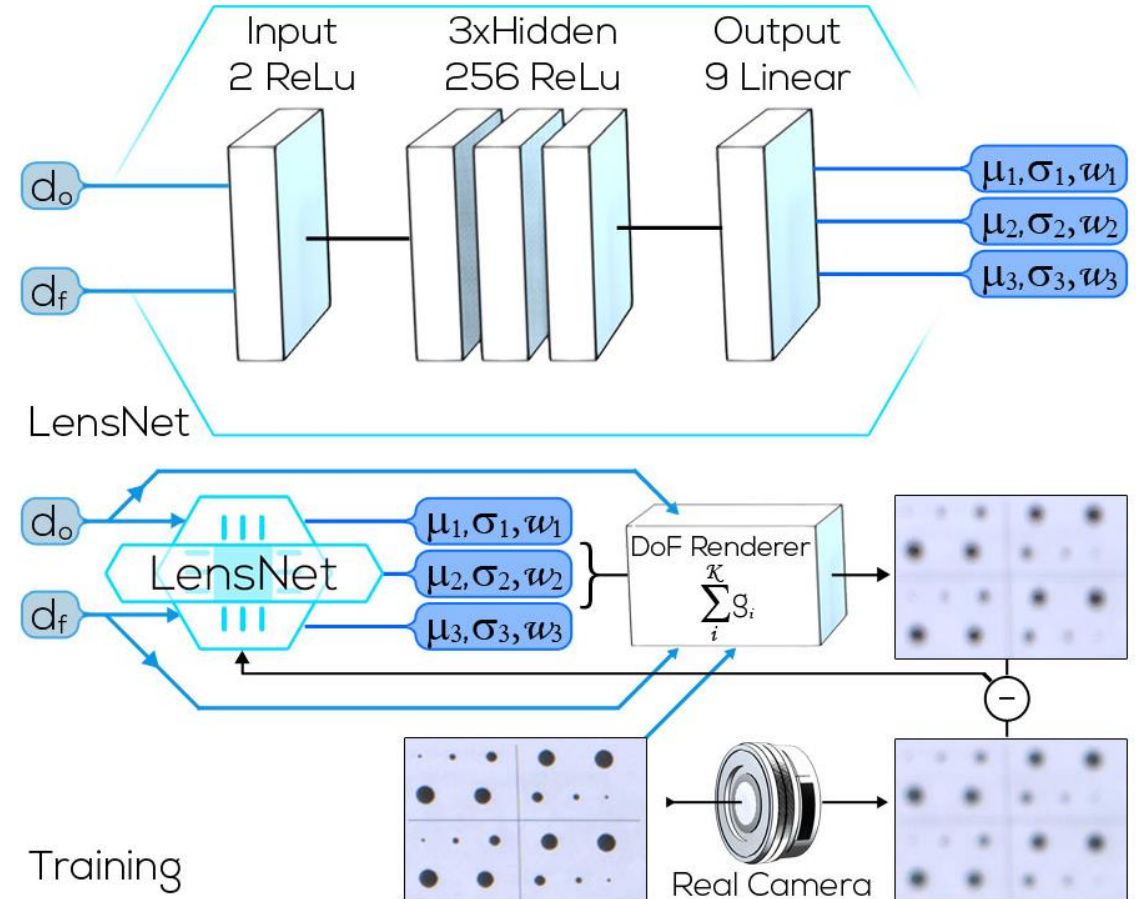

Lens Blur Network

LensNet (MLP)

- Input depth & focus distance
- Output parameters for GMM
- Render with GMM (k=3)

Training

- Calibration images
- Varying depth and focus
- Compute loss on result

Lens Blur results

Camera Sensor

Sensor (Color & Noise)

SensorNet (MLP)

- Input: RGB + ISO, exposure
- Output: color correction + noise
- Multi-Layer Perceptron

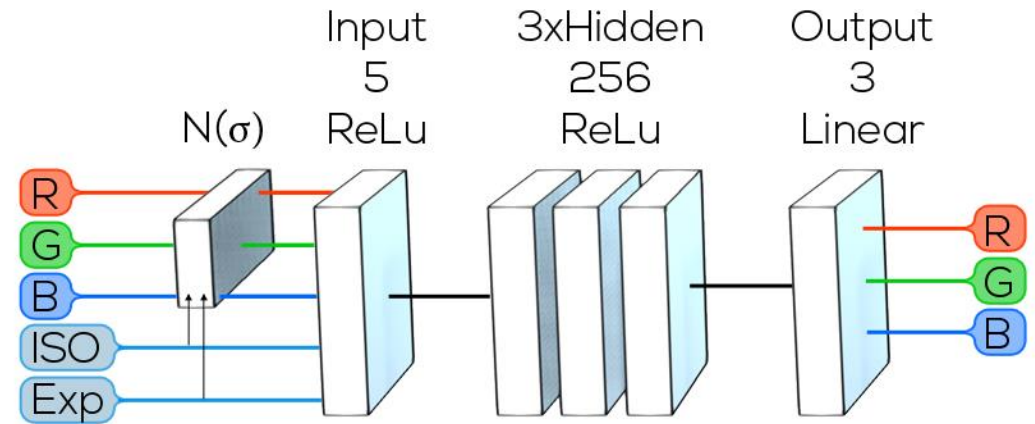

Sensor (Color & Noise)

SensorNet (MLP)

- Input: RGB + ISO, exposure
- Output: color correction + noise
- Multi-Layer Perceptron

Training

- Images of known colors (sRGB)
- Training with varying ISO, exposure

Sensor Results

ISO 100
Exposure 50

(a) Naïve

Image Signal Processor (ISP)

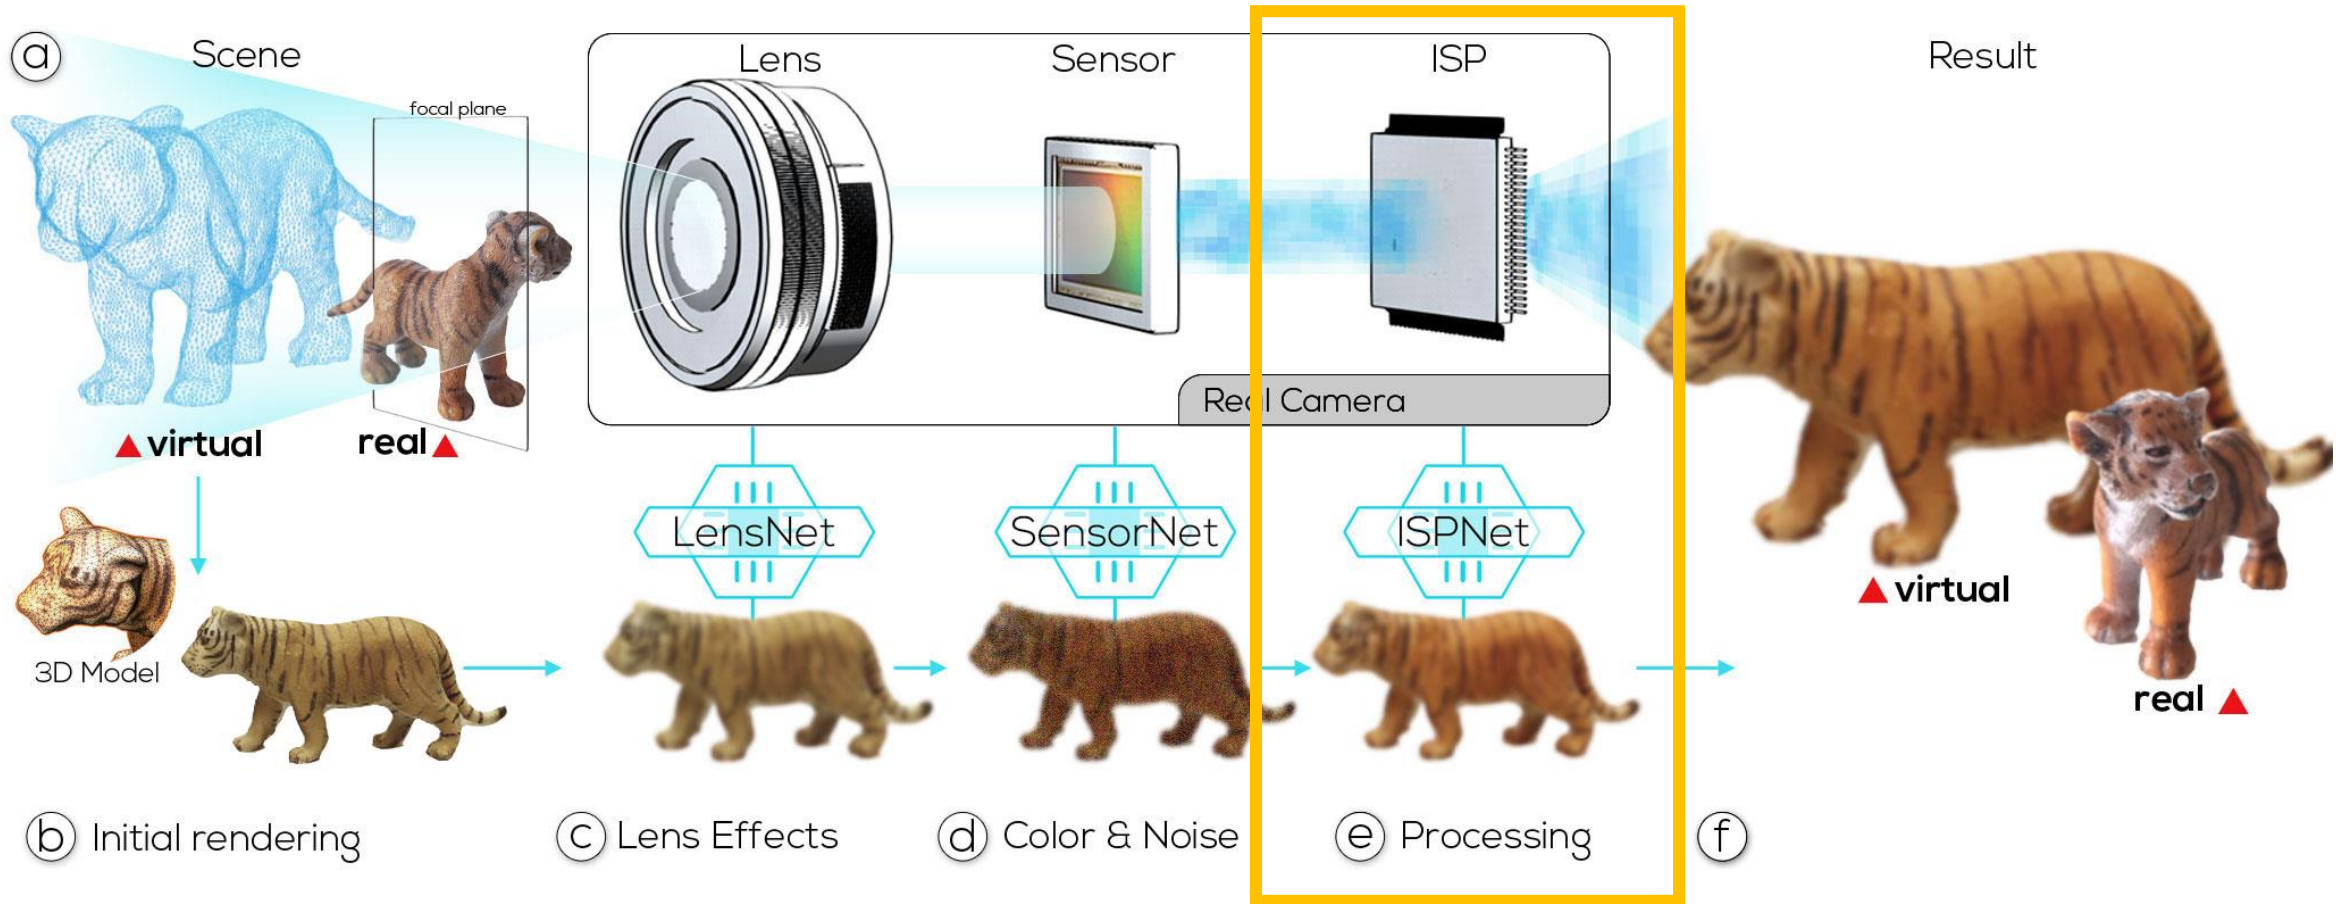

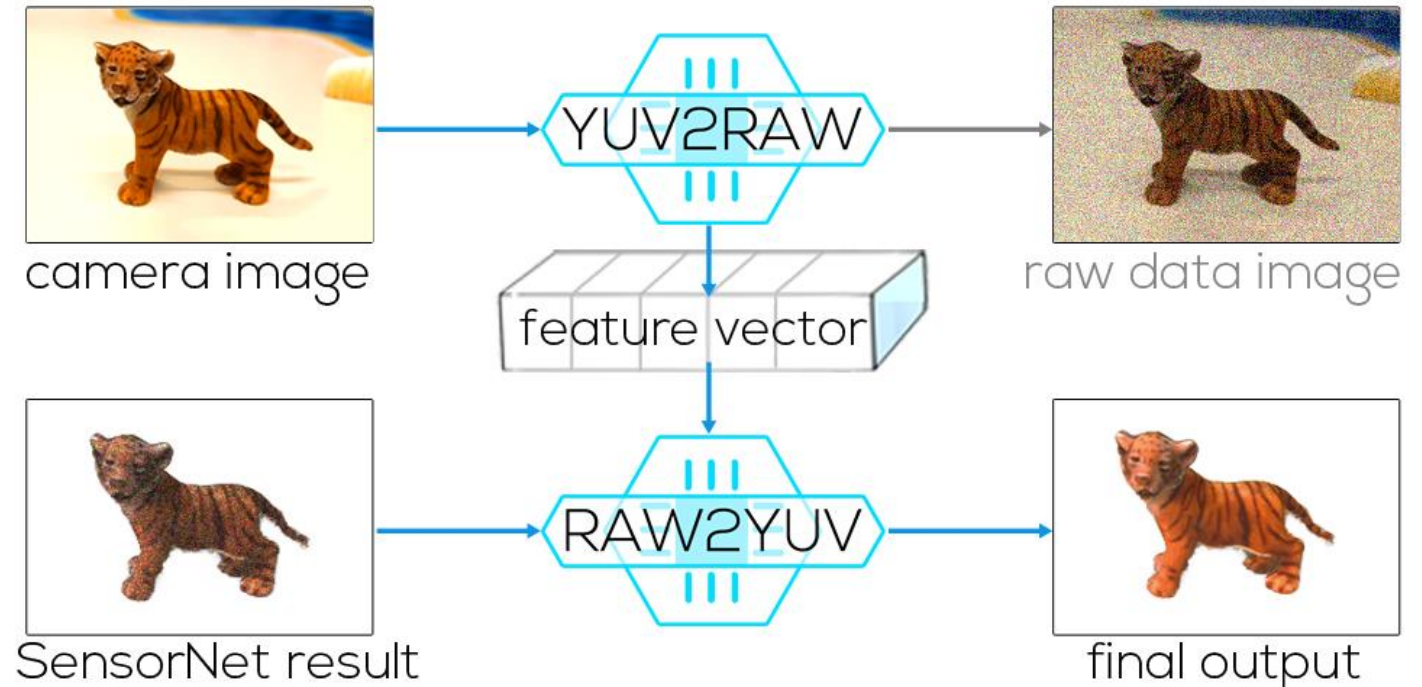

Image Signal Processor (ISP)

ISPNet (CNN)

- Adapted from Raw2Jpg [1]
- SensorNet result input
- Images from camera in YUV

Training

- RAW and JPG images
- Feature vector
- Circular loss + individual loss

Results

Limitations & Future Work

Camera Effects

- Chromatic aberration
- Motion blur
- Vignetting

Scene Simulation

- Material estimation
- Light source detection
- Shadows
